Parts Unlimited Dealer Ride

October 20–23, 2019
St. George, Utah

Parts Unlimited pulled out all the stops this year on the dealer ride. For the first time ever, we made sure to include events every day for ATV/UTV, Street, Dirt Bike and Adventure Touring riders/dealers! It was three days and three nights of fun with reps, dealers and vendors at one of the top riding destinations in America.

ATV and UTV riders got to explore and enjoy the rock and sand scenery of Sand Hollow State Park and the surrounding off-road riding areas. Riders got the chance to explore and enjoy the winding roads and trails through Zion and Bryce Canyon National Parks. The sandstone cliffs, big blue skies and amazing views made a perfect backdrop for powersports fun for off-road enthusiasts.

Thanks to all our industry friends who joined in the fun this year!

IMPORTANT NOTICE: Use of this Vance & Hines Header Wrap Kit (PART #1861-0622) may void all warranties of the exhaust system that this Kit is applied to. Header Wrap functions to insulate heat generated by exhaust gases flowing through the headpipe, thereby raising the headpipe temperature beyond its intended operating temperature. Using heat wrap may compromise the integrity of the headpipe material, and may ultimately lead to cracks in the headpipe and will not be covered under warranty. Use of header wrap on an exhaust system is a modification to and not a normal use of an exhaust system. This notice is intended to inform the buyer to consider this possibility before using this product.

CONTROL CABLES

- OEM-style cables are available in a wide variety of applications for most popular models
- Cables have nylon-lined housings and use precise OEM component dimensions
- Terminator clutch cables are available for several models; wires in the outer casing are wound lengthwise instead of around the cable to eliminate compression and spongy clutch feel

- Increase stability by moving wheels out slightly from hubs and shocks
- Enable use of larger aftermarket tires that won't rub against shocks, struts and/or exhaust
- Aircraft-grade 6061 billet aluminum spacers available in all popular bolt patterns; 1" and 1.5" widths available
- Sold in pairs

NOTE: No OEM studs are required to be removed; stud extenders are not used. Wide Tracs bolt to OEM studs; wheel is then bolted to grade 8 Wide Trac stud (included). Spacers are comparable to automotive-grade wheel adapters; design is the strongest available for ATVs.

MOOSE RACING

WHEEL BEARINGS

- Kits include all required bearings and seals
- Front kits are per wheel; rear kits are per axle, unless noted
- High-speed, low-drag bearings are EMQ quality
- Bearing seals are double-lipped rubber that provides superior exclusion of water, dirt and sand with improved grease retention
- Wheel seals are type TC nitrile elastomer, specifically designed to keep out water, dirt and sand
- Seals have a rubber-coated outside diameter that creates an optimum seal at the hub
- Steel garter spring guarantees constant pressure on the axle shaft, extending the life of the seal

FRONT STRUT KITS FOR POLARIS

- For Polaris models that use a McPherson strut in the front
- In two-wheel drive the wheel bearings are engaged
- In four-wheel drive a magnetic clutch is activated in the strut tower and the axle is driven through the strut bearings; the wheel bearings are locked out

G-FORCE DRIVE BELTS

G-FORCE C12 DRIVE BELTS

- The first CVT belt utilizing a carbon tensile cord, combining minimal stretch with extraordinary strength
- Carbon tensile cords are bonded with aramid fiber-loaded rubber with a specially formulated adhesion gum; this results in increased side-load resistance, preventing belt distortion and edge-cord pullout
- Gain optimal power transmission for faster acceleration, improved throttle response and consistent shifting performance

G-FORCE STANDARD DRIVE BELTS

- OEM-constructed drop-in belt with no clutching adjustments
- Viability testing completed to match shift curves
- Dynamometer testing proves G-Force belts outlast other high-performance belts by as much as five times
- Advanced aramid tensile cords and reinforced fiber-loaded undercord are used in construction for durability and dependability
- Proprietary measuring technology ensures exact fit
- Construction utilizes double- and single-cog configurations to match OEM belt designs maximizing heat control and flexibility

BOLD MAGENTA part numbers are new for 2020

Moose Racing chain is made through an exclusive contract with a top European supplier. Moose Racing is in a state of constant development to bring you better chain at a competitive price. The recently developed FB technology is now proven. As the FB continues to impress, the development is paying dividends through the entire range of chains.

520 FB CHAIN

- This is the top of the line; the strongest, most durable sealed chain that we offer
- FB = Fine Blanking, an incredibly precise manufacturing process that yields perfectly cut links
- Tight tolerances make the plate, pin and bushing union accurate and strong
- Due to the accuracy of the cuts and the use of stronger alloyed steel, the FB has our highest tensile strength rating, nearly 8,000 lb.
- Special sealing rings are chemically treated to gain strength and reduce friction
- The FB treatment allows the O-rings to be impregnated with grease
- FB rings are stronger and more durable than X-rings, with significantly less friction
- Gold links and rollers, silver inner plates, pins and bushings
- Clip-type connecting link included
- Recommended for applications 450cc and above
- Replacement connecting link available
