12 VOLT/2 AMP BATTERY CHARGER

Charges and maintains all 12 volt lead acid, gel and lithium iron phosphate (LiFePO4)/lithium ion polymer powersport batteries.

- CONSTANT CURRENT CHARGE - If the battery voltage is over 10 volts, the charger will deliver a 2 amp charge until the battery reaches 14.2 volts
- MAINTENANCE CHARGE - When the battery reaches 14.2 volts, the charger will automatically convert to maintenance mode. The charger will revert to charge mode when the voltage drops below a specified voltage
- LOW VOLTAGE RECOVERY - If battery voltage is below 8 volts, the charger will apply a .2 amp charge to recover the battery, once the battery reaches 8 volts, the charger will apply a .5 amp charge, at 10 volts a full 2 amp charge is applied until the battery is fully charged
- AUTOMATIC VERIFICATION STAGE - Charger automatically stops charging if the battery does not reach at least 10 volts after 2 hours of charging
- SAFETY - Power is not passed thru the charging leads unless they are connected to a battery
- LED indicator light shows charging status
- Includes heavy duty clamps and fused ring terminal SAE adapter

INDEXING WASHER KITS

Indexed spark plugs align the open end of the electrode toward the intake port. The hottest flame meets the new fuel charge for a performance gain, increases fuel mileage and plug life. This is a speed secret car racers have used for years. You simply mark the electrode side of the plug with a magic marker on the porcelain. You then shim the plugs with the washers to align the electrodes toward the intake ports. **Fits 14mm threaded spark plugs.**

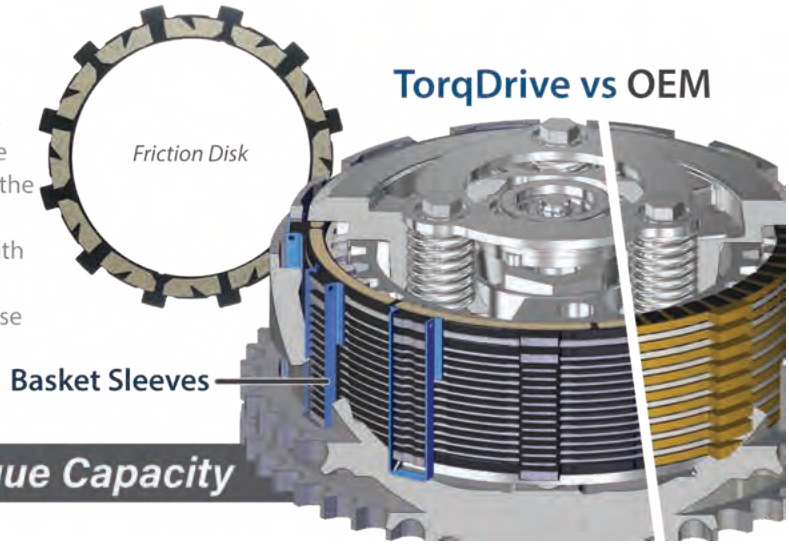
FEATURED TECHNOLOGY



EXP
AUTO CLUTCH TECHNOLOGY

Using principles of centrifugal force, EXP technology automatically engages and disengages the clutch based on engine RPM to eliminate stalling. With EXP, riders can start and stop without touching the clutch lever. By eliminating engine stalling and optimizing power delivery, we provide riders an enriched riding experience, increased clutch life, and improved navigation through technical terrain or stop-and-go traffic, while maintaining a fully functional clutch lever at all times.

TorqDrive®
CLUTCH DISK TECHNOLOGY

Our TorqDrive friction disk technology provides riders with added durability, a highly responsive feel and the torque capacity required to access the motor's full potential. TorqDrive disks feature a high strength steel core and friction material with unmatched energy capacity. TorqDrive delivers next level clutch control and consistency. Rekluse steel basket lining sleeves provide protection against basket wear and notching.

FORK / DUST SEAL WIPER KITS

- Patented fork seal features a balanced 3 lip design that evenly distributes the pressure reducing operating temperature, wear and friction.
- Custom Elastomer Fork Seals have been tested to outlast OEM fork seals. Extends typical seal life by 3 to 5 times over OEM seals.
- Stiction (friction) measures from 1/3 to 1/2 less than OEM seals for smoother fork action.
- Lower Stiction, Longer Life! It doesn't get any better than this!
- Plus, the only complete line of dust wipers! Wipers should be replaced with the fork seals to assure peak performance.

Functions smoothly during repetitive jumping. Seal life is 540,000 strokes, equal to 100 hours of continuous 28.8' jumps. Seal life exceeds current seals by 496,800 strokes (8 hours of continuous 28.8 foot jumps).

SKF

FORK SEALS

Low friction fork seal solution which improves feel and comfort,while increasing the reliability through better dirt exclusion.

- 20% Reduction of friction
- Improved feel and smoothness
- Increased life and performance
- Enhanced water and dirt protection
- Reduced wear and air suction
- M X A 5 Star Rated “The added performance gained by the reduction of stiction is icing on the cake. The cake itself is doubling the fork seal life”

H-D SEAL KIT

This kit is recommended for extreme mud riding conditions. To safeguard the performance of the fork, SKF recommends replacing oil seal and dirt scraper at the same time. A worn dirt scraper can heavily contribute to reduce the oil seal life time and effectiveness in operation

*****NOTE: KIT IS ONE FORK SEAL ONE WIPER MUST ORDER 2EA FOR COMPLETE FORK REBUILD**

HIGH PERFORMANCE FORK SPRINGS

- RT Hi-Performance Spring Features:
- Extremely accurate rates
- The tightest tolerances in the industry
- Heat-treated and Shot-peened
- Preset to eliminate sacking-out
- Extremely lightweight
- Made in the USA

The first step to great handling and predictability is selecting proper spring rates. With over 500 Hi-Performance Springs to choose from, Race Tech is almost guaranteed to have the spring you need. Sportbikes are generally under-sprung for the average rider, causing the bike to be unbalanced and unpredictable.

To order; add RATE to spring series part number.
Examples: 200-3234080
(Do NOT add decimal point in part #)

GOLD VALVES

A good front end setup provides a firm yet plush feel that doesn't dive excessively. Race Tech's Gold Valve Fork Kits are designed to do just that. Gold Valves eliminate the limitations of the stock valving setup. Gold Valves improve flow to give outstanding performance, feel, feedback, and tune ability. Gold Valve kits are an economical option for the rider in need of fork improvements without the cost of aftermarket cartridges. Perfect for the Street Rider, Track Day rider or Amateur Racer.

Each Gold Valve Kit includes Gold Valves, Valving Charts and Shims to allow a custom setup for a specific rider and conditions. Race Tech's patented DVS (Digital Valving System) allows the installer to plug in your specific riding style and obtain specific valving and setup specs for your exact needs!

These Kits can be installed by individuals interested in understanding and tuning their own suspension provided they have previous suspension servicing experience or they can be installed by a local Race Tech Center or Race Tech's Service Department.

Benefits of Gold Valves:

- Great feel
- Controls dive
- Increased tune ability
- Personalized setup
- Reduced harshness
- Increased bottoming resistance
- Improved traction
- Consistent feel
- Technical support
- Made in the USA

GOLD VALVE CARTRIDGE EMULATORS

Damping rod forks are notorious for being both too harsh yet too easy to bottom. This is the nature of damping rod fixed orifice forks. In the past all that could be done to improve these forks was change spring rate, oil viscosity or damping hole size, until now.

Cartridge Emulators make damping rod style forks perform like well-tuned cartridge forks. These tunable valves sit on top of the damping rods and are held in place by the main springs. This makes them both simple to install and completely tunable for all conditions and rider preferences.

Track tests have consistently produce lap times that are 1 or more seconds a lap faster while Cruisers and Gold Wing owners rave at the increased control and ride quality.

AIR SHOCK SUSPENSION KITS

Arnott's rear air suspension kit has been custom designed to replace the original shock(s) and provides the rider superior control, ride comfort, height adjustability and a safe, responsive and comfortable ride. Arnott's patents-pending kit offers TruAIR™ Technology with a rugged air spring bladder and shock damper design, not an air cylinder or air-assisted unit. This gives the rider more control and flexibility over air pressure, ride comfort and height adjustment.

JT DRIVE CHAIN

CHAIN IDENTIFICATION CHART

With leading edge technology and using only the highest grade of special steel alloys, JT produces a full range of superior quality motorcycle chains. JT advanced power transfer chains meet or exceed the requirements of all modern motorcycles, street, MX, enduro, off road and ATV.

- **HDR/HDS is recommended only for off road.**
- **X1R has a recommended limit of both cc and bhp.**
- **Z1R can be used on any cc but because of the heavy duty construction, it should be used on 600cc plus applications. The bph is not limited but a guide line for maximum bhp should be set at 230 bhp which covers 100% of all models but excludes heavily modified engines for drag racing, nitro injection, etc.**

OEM COUNTERSHAFT SPROCKETS

RUBBER CUSHIONED FRONT SPROCKETS

Rubber cushioned sprockets have been widely used by the major Japanese motorcycle manufacturers since early 1990's to dampen the chain impact on the teeth of the front sprocket. JT Sprockets has now released these same sprockets to the after market. Quality, design and OEM proven technology are the same as used for what is supplied to the motorcycle manufacturers and genuine replacement parts.

REAR AND COUNTERSHAFT SPROCKETS

POWERDRIVE COUNTERSHAFT SPROCKETS

All Sunstar Powerdrive Countershaft Sprockets are manufactured from case-hardened chromoly steel for the ultimate in strength and durability. They also receive a "parkerizing" surface treatment for rust and corrosion resistance.

STEEL REAR SPROCKETS

Are manufactured using only the highest quality 1045 high-carbon steel and most are heat treated for added strength and wear resistance. Computer designed weight reduction holes are included where possible. Most are zinc plated and some have a baked-on durable paint process for corrosion resistance.

STEEL SPROCKETS

Steel Rear Sprockets

- Made from 1050-88 hardened steel plate
- CAD design allows for the maximum removal of weight whilst keeping core strength
- Steel teeth last up to 3 times longer than aluminum
- The only laser cut sprocket in the market, giving unparalleled fit on the wheel
- Larger tooth radius reduces chain friction and extends chain life
- Silver zinc base layer is combined with an additional black oxide outer layer to prevent rust

Steel Countershaft Sprockets

- Manufactured from hardened SCM-435 steel making them virtually indestructible
- CNC machining provides a perfect fit and smooth chain rotation
- Fully recessed and drilled to reduce rotational mass
- Gas impregnated carburized teeth provide durability and reduce chain drag
- Grooved to prevent dirt build up under the chain and prolong chain life
- Sprocket Sizes 12-15 means 12 THROUGH 15
  12, 15 means 12 and 15 only

EDGE SPROCKETS

Edge Rear Sprockets

- Fully CNC machined steel sprockets for long life and superior fit
- Durable Tri-Zink black finish
- Lighter weight than traditional steel sprockets
- Edge alloy insert disks fit into the sprocket inset and are available in multiple UV resistant colors

Steel Countershaft Sprockets

- Manufactured from hardened SCM-435 steel making them virtually indestructible
- CNC machining provides a perfect fit and smooth chain rotation
- Fully recessed and drilled to reduce rotational mass
- Gas impregnated carburized teeth provide durability and reduce chain drag
- Grooved to prevent dirt build up under the chain and prolong chain life

Sprocket and alloy insert disk sizes: 12-15 means 12 THROUGH 15; 12, 15 means 12 and 15 only, add tooth count to end of part number when ordering.

Edge alloy insert disks are sold separately, installation of the sprocket without the insert disk might require additional spacers, consult with a qualified mechanic.

Street Steel Kit

Street Aluminum Kit

"GFRA" (Go Fast) 520 conversion kits with a lower gear ratio are available for most popular models for faster acceleration, aluminum and steel sprockets available. Compare OE gearing to Vortex kit gearing to verify gear ratio differences.

"GFRS" (Go Fast) Same features as the "GFRA" kit except they include a steel (instead of aluminum) rear sprocket.

"HFRA" (Hyper Fast) 520 conversion kits with 1 down in front, 2 up in rear gearing with Hardcoat aluminum rear sprocket.

"HFRS" (Hyper Fast) 520 conversion kits with 1 down in front, 2 up in rear gearing with laser cut steel rear sprocket.

"SSA" (Superstreet) kits available for most later model liter and larger sportbikes, great alternative and longer lasting than 520 kits but lighter than stock.

"WSS" (Warranty) steel kits utilize OEM gearing and chain size for increased durability.

BRAKING POWER UNDER CONTROL

RADIAL MASTER CYLINDERS

- Available in both 16mm for single disk bikes and 19mm for dual disk bikes
- Comes with integrated reservoir and optional brake light switch for street conversion
- #32-0009 is to be used with a separated reservoir (OE is recommended) and comes with the brake light switch and an optional bracket for rear mirror fitment
- The goal of the radial master cylinder vs. the stock axial master cylinder (radial vs. axial is the direction of the piston's movement) is that you obtain the same or more braking power by using less force on the lever
- Radial style Clutch master cyclinder features a fully folding machined lever as well as 12mm oil reservoir and even a spot to thread in a mirror.

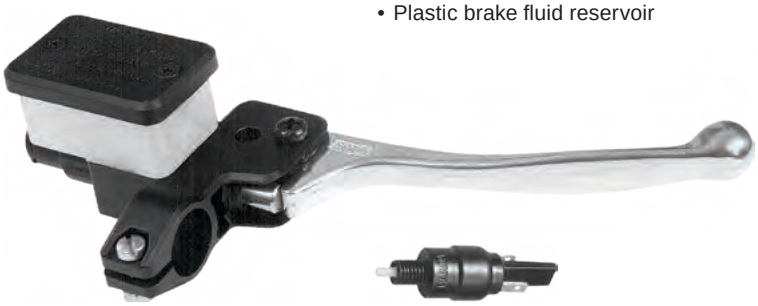
MAGURA

HC1 RADIAL MASTER CYLINDERS

TECHNICAL DETAILS

- 70° RADIAL DESIGN Pushrod and cylinder at 70° angle to handlebar results in decreased friction and more direct brake feeling for improved control.
- FULL ABS COMPATIBILITY MAGURA "HCT" is approved for continuous use with all ABS systems without loss of performance due to pressure compensation (ABS-Kickback)
- ADVANCED SECONDARY SEAL TECHNOLOGY The rear piston seal has been specially designed to prevent the introduction of air through secondary seal ingress. The advanced X-Ring seal design will reduce or eliminate this problem common on racing motorcycles at higher RPM.
- RESERVOIR MOUNT The master cylinder is supplied with an external reservoir and mounting bracket designed to use minimum space and with smoked glass to optically determine the level and condition of the brake fluid at all times.



ITEMS INCLUDED:

- Banjo bolt with sealing rings (M10x1)
- Remote reservoir
- Standard clamp (without mirror mount)
- Brake light or start safety switch
- ABE for brake fitments
- Owner‘s Manual

MAGURA

HC3 RADIAL MASTER CYLINDERS

- CNC Machined from high grade aluminum alloy to ensure a lightweight design combined with maximum rigidity which has been built to last
- 90° full radial design pushrod and cylinder at right angle to handlebar results in decreased friction and more direct brake feeling for improved control
- Full ABS compatibility MAGURA “HCT” is approved for continuous use with all ABS systems without loss of performance due to pressure compensation (abs-kickback)
- 3-way lever ratio hand activated master cylinder lever has a clever 3-way adjustable point of support (This mimics the effect of using a piston size 1 mm below and above the selected hydraulic ratio) Simply remove and reposition the lever support retaining bolt for a softer or harder pressure point, All 3 positions offer 90° full radial activation
- Folding lever blade reduces the force exerted on the master cylinder body in the event of a fall over
- Advanced secondary seal technology the rear piston seal has been specially designed to prevent the introduction of air through secondary seal ingress (The advanced x-ring seal design will reduce or eliminate this problem common on racing motorcycles at higher rpm)
- External reservoir and mounting bracket designed to use minimum space and with smoked glass to optically determine the level and condition of the brake fluid at all times
- Titanium lever and clamp retaining bolts included save weight while remaining strong and durable

GPFAX SINTERED ROAD RACE BRAKE PADS

GPFAX Sintered Road Race Brake Pads are for RACE ONLY use. This is a blend of brake pad that has higher friction and far better grip than any other brake product on the market.

GPFAX Sintered Road Race Brake Pads have by far the highest known friction with a measurement between 0.6 and 0.7 and deliver the most amazing brake effect. Because of this factor, they are unsuitable for street use or for road tyres.

Zero brake fade is guaranteed and the heat stability of these brake pads is perfect leaving the racer with high confidence and a product that can be used over numerous races.

- ONLY FOR RACE USE
- Highest performance friction level known
- NOT R90 street legal or TÜV tested
- Guaranteed for lifetime performance

CABLES

How To Measure: Cables are sorted based on the length of the outer sleeve protector, making it easy to find your cable even if the inner wire is broken or missing. Simply measure from end to end of the outer sleeve only. Note that most cables can vary 1/2" on the sleeve length and still fit. It is important to note the distance the inner cable extends past the sleeve as some carburetors require different lengths. Always test your unit before operating. Also visit online and see the "How to Measure" video at outsidedistributing.com.

The MT-A1 Motor is actually a 47cc Engine, however it is generally promoted by manufacturers as a 49cc engine. The other X Style Engines are commonly found in more performance 2-Stroke units and also on stand up scooters. When seeking parts be sure of the engine type and check the item description to ensure its compatibility.
Tech Tip:
When replacing engine accessories such as clutch, carburetor, drive sprocket and recoils, it is recommended to simply replace the entire part assembly. It's very cost effective.

GAS CANS

- Our slogan is true. Simply press the button to pour. It's intuitive. This is the easiest gas can to use on the market - it's not even close. A gas can should be easy to use.
- We used simple physics to develop a nozzle that automatically stops the fuel flow when the target tank is full. Just hold the button down. Simple
- Our patented nozzles flow up to twice as fast as other nozzles. No gurgling or interrupted flow. When filling up large equipment how long do you want to hold a 40 lb. 5 gallon tank?
- Double wide view stripes on both the front and back of our smaller cans. Now you know your fuel level from across the yard or garage. No guessing and no extra trips to the gas pump. Every gas can should have view stripes. No-Spill is the only can with them
- Our cans have the thickest skins. A robust 70-100% thicker than most cans. This costs much more to make, but you get what you pay for
- Three handles on each can. Finger handles on each nozzle, and a finger slot on the bottom of each can (rear handle on the 5 gal.). Your hands share the weight and are in a comfortable position to pour with accuracy. Our design makes it easier to hold. The top handle is for carrying

SOCKET BIT SETS

Motorcycles, ATVs, snowmobiles, and personal watercraft make widespread use of set and cap screws that require hex ("Allen") and Torx® wrenches. Such fasteners are very vulnerable to damage from tools with loose tolerances and/or inferior materials.
Every rider should have a comprehensive set of socket bits for home, pit, or mobile use. Our three new sets are professional tool quality, yet priced to meet any budget. Socket bodies are polished chrome, and bits made of a heat treated chrome vanadium alloy that exceed ANSI standards. Unlike most socket bit sets found elsewhere, all sockets are 3/8" drive so you only need one ratchet or T-handle for all sizes. A reverse laser imprint provides for easy size identification. To help keep your socket drawer organized, each set ships on a rail with handle. Tools are lifetime guaranteed.

PARALLEL DIAGNOSTIC SYSTEM

Parallel diagnostics are designed for measuring input and output signals from the electronic fuel injection module (EFI) and other modules. Measurements can be made on running engines. The system consists of a wiring harness adapter and breakout box. The breakout box is inserted between EFI module and motorcycle´s wiring harness so that the system continues to function as normal. Monitoring points for all connector pins of the EFI module are clearly arranged on the breakout box. It is possible to measure signals and waveforms from all systems and actuators. Disconnecting the ECU from the breakout box allows quick and reliable check of the integrity of the wiring harness in respect to continuity, and leakage currents. Universal connector kit includes common adapters (73 connectors) for non destructive diagnostic operations on the wiring harness.

STRAP RING

- The Strap Ring is made in the USA of stainless steel
- Allows the customer to attach tie-downs almost anywhere there is an 8mm or smaller bolt (smaller bolts obviously are not as strong).
- The Strap Ring is break rated at 2000 pounds which far exceeds all the tie-down hooks or carabineers on the market.
- The original and main idea was to give the motorcyclist a place to attach tie-downs to the triple clamp of a dirt bike but we have found a million other uses, for instance, in the bed of a truck or trailer, behind passenger peg bolts on a street bike or anywhere you can put a bolt!
- The eye is large enough to accept the large size 3/8 inch coated tie-down hooks as well as 8mm carabineers and comes in pairs

Protect Valuables from Smash & Grab Theft

Most theft is see it, grab it, run. Prevent opportunistic theft without the burden of cumbersome chains, cables or locks. Lockstraps are well-constructed, using an eight bound steel cable between double nylon webbing, tough rivets and dual combination carabiner locks. Lockstraps also incorporated a soft tie-extension so no scratching occurs. Lockstraps provide piece of mind, security and unsurpassed quality. Best of all, our Lockstraps will not come loose and “pop” off like typical straps with “S” hooks.

Wheel Chock	**52-2630**	**$84.95**

PIT STOP WHEEL CHOCK

Make your life easier with the Pit Stop/Trailer Stop. Just place it in your garage, and ride your bike right into it - no kickstand required. Now the bike takes up less room in your garage because it sits upright, and you can check the fluids, service it, or use it outside to wash and detail your ride.

When the time comes to trailer your motorcycle, the Pit Stop/ Trailer Stop simply snaps into the Trailer Adaptor Kit (290-01002) that mounts to the floor of your trailer, and you're ready to secure your motorcycle for safe transporting. The chock will hold your motorcycle so securely, only one person is needed to load and unload any bike, and only two tie-down straps are required. And you won't damage your sensitive suspension parts because you never need to overtighten your straps. If you are transporting your bike in the back of a pick-up truck, you don't even need our adaptor kit. Just place the chock up against the front of the bed, and simply tie the bike from its mid-point towards the front of the truck bed, and you're good to go.

If your trailer is equipped with E-Track, use the Universal E-Track Adaptor Kit (290-01004) to mount the chock to, which allows you to place your bike anywhere you like along the track, fore and aft, or side to side.

The patented adjustable cradle fits ALL bikes from dirt bikes and sportbikes, to cruisers and heavy touring bikes, and anything in between, up to 3,000 lbs. It will work on front and rear tires from 14" to 22" and 80mm to 230mm. The Pit Stop is also perfect for racers and track day riders, since you can haul your bike to the track in the chock, and then take the Pit Stop out of the trailer and use it as a track stand.

The Scooter Pit Stop/Trailer Stop works with scooters and smaller motorcycles with wheel diameters ranging from 8" to 16" and tire widths from 80mm to 120mm.

The CONDOR® Pit-Stop/Trailer-Stop is made of light weight aluminum, weighing only 30 lbs., and folds down for easy storage.
