BOBSTER®

BOBSTER® DNA

Bobster® prides itself on leading the pack when it comes to technology. All our products feature optically correct, polycarbonate shatter-resistant lenses that offer 100% UVA & UVB protection. We also offer products with Rx ready frames, polarized lenses, photochromic lenses, and all-new High-Definition lenses.

HIGH-DEFINITION LENSES

High-Def lenses will enhance your vision whenever worn.

What this technology does is elevate individual colors, which enables you to see imperfections in the road, changes in the water, or divots in the dirt much easier.

Without having to strain your eyes to see what is coming up, you can anticipate and react with more precision while filtering out harmful UV rays, leading to overall greater visual comfort.

POLARIZED LENSES

While ordinary tinted lenses reduce brightness, only polarized lenses eliminate glare.

To ensure the impact resistance of the lenses, Bobster® uses polycarbonate polarized lenses while most other companies use polarized lenses that will shatter on high impact.

PHOTOCHROMIC TECHNOLOGY

Bobster® photochromic lenses are available in a variety of eyewear styles and are precisely designed to automatically darken/lighten to the amount of ultraviolet (UV) light that reaches the lens.

The advantage of a photochromic lens is that you can wear your eyewear all day and not have to carry multiple sets of eyewear with you or change your lenses according to light conditions.

Do not leave photochromic lenses in direct sun or extreme heat for long periods of time as it will decrease the performance of the lenses.

BOBSTER® GOGGLES

Expect superior functionality, comfort and durability from Bobster® Goggles. Specifically designed to conform to various shapes of faces, the goggle frame creates an effective seal that significantly reduces wind blasts and vibrations. - Four universal valves are included to fit Boston valves and stem valves
- Accordion-style hose stretches to five ft. long and interlocks to the pump so it doesn't fall off while you're pumping

IMPELLERS

- Constructed of ultra high-strength, corrosion-resistant stainless steel
- Exclusive hub-end water seal keeps the nasty stuff out of precious parts
- Mirror-smooth finish and polished hub resists cavitation
- Impeller pitch is determined by casting, not bending

CONCORD: THE POWER TORQUE SERIES

- This unique impeller enhances all-range maneuverability with no slippage in water hookup
- Variable pitch offers both low-speed torque and all-out high speed in one impeller

X-PROP: HIGH SPEED AND ULTIMATE PERFORMANCE

- X-prop series impellers produce the most powerful propulsion in the water from an advanced design that incorporates a high-compression hub and cambered blades

DYNAFLY: MAXIMUM ACCELERATION

- Blade geometry designed specifically for high compression ratio jet-pump systems
- Improve acceleration and top end while eliminating performance holes
- Lower pitch angle is recommended for stock motors; higher pitch angle is recommended for modified motors; lower pitch angle can also be used with modified motors if improved acceleration is desired

TWIN: STATE-OF-THE-ART DESIGN

- Specially for select Sea-Doo RXP, RXT and GTX models and Yamaha SHO, SHO FRZ and FZS models, the Twin series features the latest advances in high-performance impeller design

SUPER CAMBER

- Grunt and speed from one impeller
- The blade has a variable pitch, designed to give both strong low-end thrust and unmatched top-end performance
- Race, tow waterskiers and carry multiple passengers with ease
- A- and B-series offer a cost-effective solution and features both low-speed torque and all-out high speed in one impeller
- I-, J-, K- and S-series feature a proven impeller design with increased blade surface and smaller hub for more power and volumetric flow, making them the best all-around impellers on the market

SUPER CAMBER NOTATION: In the application chart, Super Camber impellers are listed in the format "Super Camber (x/y/z)." This denotes the Solas series for the Stock, Limited and Modified impellers respectively. "Super Camber (I/J/K)," for example, means that the Stock impeller listed is "I" series, the Limited is "J" series, and the Modified is "K" series.

NOTE: Choose impeller based on level of engine modification: Stock, Limited or Modified. See appropriate columns in chart.

NOTE: Lower pitch impellers recommended for high altitude, pulling or freestyle applications.

AQUAVEIN INTAKE GRATES

- Maximize water flow and pump efficiency
- No more slow acceleration, bouncing, sliding, rough turning or mediocre top-end
- Patented dual-wing technology feeds water into the pump's entryway so air won't get trapped in the pump and cause cavitation
- Deep side rails help channel water and force-feed the wing area while turning
- Great for managing rough water conditions
- Stability, handling, cornering and acceleration are all dramatically improved

ENGINE KEEPERS

- Each set contains a left and right side front mount retainer and extended stainless hardware for installation
- Unique close tolerance design retains the front "top heavy" weight of the engine block from being flexed or thrown forward during flat out maneuvers or inverts
- Since this is a common occurrence even in flat water racing action, Blowsion designers also found them to be excellent insurance against ever having to replace those expensive engine mounts again

POWERSHOT ADJUSTABLE FUEL TUNERS

FOR SEA-DOO

- Deliver increased horsepower, acceleration, and stronger mid-range performance by delivering a higher performing air-to-fuel ratio (A.F.R.) to the engine
- Many of today's high-performance fuel-injected 4-stroke muscle craft have a lean A.F.R.
- R&D Performance has tested, documented and analyzed the OEM fuel maps on every current fuel-injected 4-stroke watercraft, and pre-programmed and coded the new R&D Powershot fuel-injection control module to safely alter the OEM fuel map to a higher performing and safer A.F.R. (richer)
- More horsepower, greater acceleration and stronger mid-range are the result when the proper A.F.R. is achieved and is tuned for optimum performance

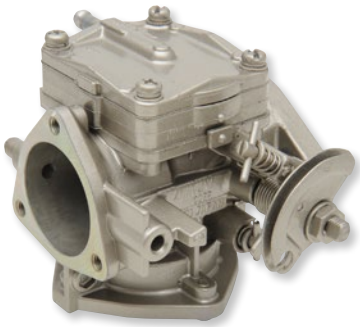

1020-2545

- The R&D Powershot is fully adjustable on the fly (with the engine running, observed and tuned while riding), and will accommodate a wide range of adjustability to properly performance-tune the A.F.R. for any combination of aftermarket parts
- The R&D Powershot will add horsepower, reliability and adjustability to any electronic fuel-injected 2- or 4-stroke watercraft engine

NOTE: For competition use only.

BMS (BATTERY MANAGEMENT SYSTEM) 12V LITHIUM BATTERIES

- Smarter and lighter weight
- Lithium batteries provide better fuel economy, last four times longer, are two times lighter, are 99% more efficient in charge and have a constant current versus AGM variable current
- All BMS batteries feature four terminals (two positive and two negative) that allow fitment on many powersports makes/models and also provides electrical accessory hook-ups options
- Flexible accessory blocks are also included to absorb vibration and to allow custom fitment on many different powersport models
- Includes BMS Smart battery management system that monitors, optimizes and protects the battery
- Battery management system is used to monitor battery SOC (State of Charge), optimize battery performance, protect battery from over-charge (over voltage protection), protect from over-discharge (low voltage shut-off)
- Battery Activation Wire connects Battery Activation Switch to BMS (Battery management system)
- When BMS detects possible over-charge or over-discharge (voltage below a certain threshold), the BMS will shut off the battery (cannot charge/discharge) to prevent permanent battery damage
- User can re-activate the lithium battery by pressing the Battery Activation Switch on the included Quick Disconnect Cable to allow battery to be charged again
- Quick Disconnect Cable has three terminals: one to positive, one to negative and one to Battery Activation Switch
- Fireproof coating engineered mechanism that supports high current flow during voltage discharging to provide thermal protection
- LiFePO4 Cell High performance UL1642 certified LFP cell
- IP67 bottom case engineered material with high melting point

NOTE: User is recommended to use Battery Tender Lithium Charger to recharge the lithium battery.

IRIDIUM SPARK PLUGS

BETTER METALS MEAN BETTER SPARK PLUG DESIGNS

- Six times harder than platinum, iridium doesn't melt in temperatures up to 4,000°F
- Because the iridium electrodes of these plugs can be shrunk to only 0.4mm, voltage requirements decrease while firing performance improves
- 360° laser welding of electrode provides a seal that resists wear even in the worst conditions
- Ground electrode features a tapered cut and U-groove that form a large volume area for the flame's center
- Use NGK cross-reference chart to order and stock these plugs

POWERMADD

E3 RESISTOR SPARK PLUGS

- Unique electrode shape maximizes the power created by the spark plug – Diamond Fire technology
- Electrode is a combination of performance and technology that results in an improved flame kernel shape
- This flame front ignites the bulk air/fuel mixture faster, moves heat into the combustion chamber faster and creates a more localized pressure front for faster pressure rise during the cylinder power stroke
- The result is more complete combustion and an improvement in engine performance
- A truly premium performance plug
- Sold each

KILL SWITCH HOW TO ORDER

NOTICE TO CUSTOMERS: There are two types of stop switches: (1) Normally Open (NO) or (2) Normally Closed (NC).

Switches in this catalog are typically of the Normally Open (NO) type. They work by GROUNDING the primary ignition lead when activated.

Note that they will not work on electrical systems requiring a Normally Closed (NC) switch, which works by OPENING the circuit when activated. NC switches are typically used on battery type ignitions, which may have an ignition key as an identifier. NC switches are generally found on newer machines. If in doubt, check your machine's wiring schematic.

STARTERS

- Affordable starters are constructed with longer-life bearings than OEM
- Many OEM starter motors have an unprotected output needle bearing on the outside of the output shaft's seal; moisture can and does enter the output cap of the electric motor and follows the armature shaft to the unprotected output needle bearing, which corrodes the bearing
- Rick's takes the extra step of installing a double-sealed ball bearing, with the output shaft seal on the outside of the bearing in their new aftermarket unit
- This simple application of common-sense engineering does two things: first, the outside bearing is now protected from damaging water entry, and second, the sealed ball bearing is replaceable

MOTOMINDER HOUR METER

- Automatically records and displays your engine's accumulated run time, so oil changes, piston, rings, valves, spark plugs, etc. can be serviced at the correct maintenance schedule
- Correct schedule saves costly engine damage from service neglect, but Motominder can also save money from servicing too frequently
- Powered by the vehicle's electrical system by simply cable-tying its power line along the spark plug lead or direct connecting to the kill switch wire
- Smallest engine hour meter available (approximately 1 by 1.5 inches); doesn't require additional mounting brackets and can be easily mounted by the peel-and-stick method to the frame or other convenient area
- Records the installation date, and displays this briefly whenever the engine is started; on start-up it displays hours of runtime for 1 minute, flashes the runtime every 10 seconds while the engine is running and also displays runtime at power down for 2 minutes, so riders have plenty of time to get their helmets off before checking the display

tecMATE

IGNITIONMATE

- Compact dual-display peak-voltage ignition tester that makes trouble-shooting all types of spark ignition systems easier, surer and quicker
- Ignition signals can damage even a good digital multimeter – IgnitionMate is specially designed to measure and dynamically display both primary and secondary ignition signals on bright LED bar graph displays
- The power sport industry's top tool for troubleshooting problems on all ignition systems (transistor, CDI, magneto, points)
- No disassembling of ignition components is required – this avoids accidentally introducing or correcting poor contacts in the system, which may further confuse and delay resolution of the unidentified problems
- Spark scale to measure the consistency of the high-voltage current signal and to determine misfires; the signal strength can be varied for display purposes; spark strength of different cylinders can be compared
- The dual displays allow simultaneous measurement of two different ignition signals; this allows you to narrow down between which two points the problem lies
- The instrument is powered by an internal rechargeable 1.5Ah NiMH battery that provides six hours autonomy; recharge the battery with any 12VDC source, such as a vehicle battery or 12VDC adapter
- The standard kit includes the instrument with rugged rubberized protective and mounting holster, combination spark cable caliper pickup with silicon lead, stick-coil adapter, silicon test lead set with insulated crocodile clips and Probulator backprobes, 12VDC 6½' power lead, instruction manual and quick reference guide all packed in a custom carry case
