BOTTOM END REBUILD KITS

FORGED BOTTOM END ADVANTAGE

The foundation of any bottom end rebuild is a solid forged crankshaft assembly, which provides strength and reliability far surpassing any cast part that lacks consistency. Forged crankshafts due to their lighter weight, more compact dimensions and better inherent dampening, rev higher and run smoother than their cast counterparts.

This part of the engine has a huge amount of stress due to twisting and bending 1000's of times a minute while running under load, you don't want an inferior product here to ruin a motor. Wiseco engineers have designed our crankshafts to meet or often exceed OEM tolerances giving you the best base for your bottom end.

CRANKSHAFTS / CONNECTING RODS

Wiseco powersports crankshafts feature a double forged connecting rod made from dedicated forgings. The rods maintain superior strength, durability, and dimensional consistency through improved grain flow. Shot peening eliminates residual stress and oil slots are located to maximize lower rod oiling and extend bearing life.

Coated bronze thrust washers have a dimpled design to increase oil retention and reduces stress between the connecting rod, washer, and crank web. Double-drilled small ends provide the piston pin with extra lubrication and cooling, reducing distortion of top end due to thermal transfer from the piston.

BOTTOM END KIT FEATURES

- Each kit contains everything you need to complete your rebuild the right way, the first time- crankshaft and connecting rod, all applicable bearings, and complete bottom end gasket kit made to meet or exceed OEM.
- Wiseco connecting rods are double forged from a dedicated forging and feature shot peening, oil slots, and coated bronze thrust washers.
- Bottom end gasket kits are made from premium materials, exceeding OEM standards, to provide exceptional seal between critical mating surfaces.
- Main bearings are manufactured to the highest quality standards. Each is case hardened for maximum life and smooth operation at high RPM's.
- Corrosion resistant surface treatment to prevent corrosion and pitting over long term use or storage. This will add to the life as well the strength of the assembly.
- Top end of rod is bushed for oil retention and eliminates pin galling. The bottom end rod bores are case hardened to 58-62 RC to optimize bearing running surface.
- The crank pin bearings are manufactured from the highest quality, hot rolled steel case hardened to 58-62 RC to extend the lifetime of the assembly.
- Caged needle roller bearings to provide the highest possible RPM.

HOT RODS CRANKSHAFTS

Hot Rods crankshafts are regarded as the premier alternative to costly manufacturer cranks. But, in addition to being a cost effective alternative, Hot Rods crankshafts also bring a level of uncompromising quality, design and innovation not seen in its competitors. One such innovation would be the Hot Rods line of drop-in stroker crankshafts. Not only do these stroker cranks bring about a heightened level of performance, but do so without costly case machining, custom cam chains and spacer plates. Better yet, many Hot Rods stroker cranks even utilize the engine's stock piston.

HEAVY DUTY DROP-IN STROKER CRANKSHAFTS

Hot Rods also offers a full line of drop-in stroker crankshafts. Not only do these stroker cranks bring about a heightened level of performance and increased displacement, but do so without costly case machining, custom cam chains or spacer plates. Better yet, many Hot Rods stroker cranks even utilize the engine's stock piston.

HIFLOFILTRO®

PREMIUM FILTERS

WHY HIFLO?

Providing unbeatable performance and exceptional value, Hiflofiltro is the best-selling brand of aftermarket filters for motorcycles, scooters, and ATVs worldwide. The filters are also supplied to original equipment manufacturers as well as private label brands.

Materials

To achieve our quality aims and to ensure the consistency of our products, we use only premium materials from well known manufacturers: steel from Toyota Tsusho and NKK Japan, glue from Henkel Germany, filter paper from Ahlstrom Filtration Finland, Hollingsworth & Vose USA and Awa Paper Japan.

Production

The Hiflofiltro-Thai Yang Kitpaisan factory was founded in 1955 and has been manufacturing filters for the OEM motor industry since 1963. With the experience of more than four decades, continuous research and development and modern production facilities, we manufacture some of the best quality filters in the world.

Quality Control

Every oil filter goes through 16 individual quality control checks before it is ready to leave the factory. The whole manufacturing process, including the checking of raw materials, individual filter testing, is regularly audited and verified independently by TÜV SÜD.

PREMIUM OIL FILTERS

Hiflofiltro is the world's first TÜV approved oil filter. Constructed using the best materials available, all Hiflofiltro oil filters meet or exceed original equipment performance levels.

OE REPLACEMENT AIR FILTERS

Hiflofiltro air filters are manufactured to fit the factory air box and are a direct replacement for original equipment filters. Top quality powerflow filtering media, developed for modern high performance engines.

DUAL-STAGE RACING FOAM AIR FILTERS

Competition off-road air filters manufactured in the Netherlands using a special dual-layer foam, formulated for maximum filtration and optimum air flow for improved power. Top quality materials and superior construction allow the filter to be used over and over again without any loss of performance.

FACTORY REPLACEMENT UNI AIR FILTERS - ATV

The principal of how foam air filters work is simple: "open cell" polyurethane foam is wetted with specially developed filter oil. The "sticky" filter oil is suspended in the path of the dirty air on the strands of the web-like cell structure of the foam. This makes it impossible for dirt to pass through the depth of the filter without sticking to the strands. As the outer strands become loaded with dirt particles, the wetted strands down stream start trapping dirt, allowing the entire thickness to be utilized. This prevents surface loading or air restriction for 80% of the surface life of the air filter element. When the filter is sufficiently dirty it can be easily washed, re-oiled and re-used.

BOYESEN ATV PRO SERIES REEDS

Q: What advantage do Pro Series Reeds have over Power Reeds?
A: Pro Series dual-stage reeds combine a carbon-fiber top reed with a fiberglass bottom reed for unrivaled performance. The Pro Series Reeds are more responsive than our traditional Power Reeds. The carbon-fiber top reed has excellent response characteristics that provide even quicker acceleration, stronger throttle response, and more over-rev than our standard Power Reeds. The fiberglass bottom reed provides stability and longer reed life.

THE VFORCE4 REED VALVE SYSTEM

The all-new VForce4 is built upon the solid foundation that has made the VForce3 such a success for the last 10 years. While the VForce3 has been continually refined over the years, this is a complete redesign of the entire system. While the most obvious change on the all-new VForce4 is certainly the full-length reed stops, let's take a look at some of the other significant changes as well.

- All-new reed petal resin system, carbon fiber and lay-up
- Pre-curved reed petal ensures better seal at tip
- Wider reed cage for maximum airflow
- Combined reed tip area increased by 10.5% resulting in increased total air flow
- Airfoil shape added to cage tip to increase air velocity from outer ports
- Long reed stops added to progressively slow petal tip velocity, for increased petal durability
- Reduced frontal area of central wing by 15.6% combined with a more aerodynamic shape

The TMX features a flat slide design in a smooth bore Venturi to provide improved throttle response and wider powerband. The float system with independently moving floats, working with a main jet enclosed in a baffle chamber, allows the TMX to perform smoothly without hesitation on the roughest terrain. TMX Series Carburetors are available in 35mm bore sizes for 125cc race engines, and in 38mm bore sizes for use in 250cc race engines.

Mikuni TMX Series Carburetors are intended for off-road riding and racing use only. Not legal for sale or use in California or other locations where similar pollution laws may apply.

POWER JET KIT

Power Jet Kits are used in two-stroke engine applications to improve midrange throttle response and add additional fuel to wide open throttle running conditions, especially with snowmobile clutches. Kits may be installed easily on Mikuni TM and VM Series carburetors.

The Jet Needle controls the fuel mixture in the mid-range 1/4-3/4 throttle position. The taper of the needle determines the amount of the fuel. For example: the thinner the diameter of the needle, the more fuel will be drawn. The thicker the diameter of the needle, the less fuel can be drawn.

THROTTLE VALVES

To determine a left hand or right hand throttle valve you must look at it from the intake side (cutaway facing you) to see what side your idle adjustment is on. If it is on the left side, it is a LH throttle valve and if it is on the right side it is a RH throttle valve.

K&L AIR CUT OFF VALVES

Here's an inexpensive alternative to the costly OEM assembly. To prevent "afterburn" generated by a lean fuel mixture when closing the throttle, the air cut-off valve temporarily closes the slow-jet air passage, creating an instantly richer mixture. Included in these high quality kits are all parts necessary for a complete rebuild (diaphragm, spring and o-ring). Made in Japan.

BRONCO ATV COMPONENTS

MANIFOLDS/CARBURETOR FLANGES

- All flanges are made of 1051 + 1052 aluminum.\
- Properly support your valuable carburetor by replacing your worn out carb flange
- OEM carburetor flanges are prone to failure due to exposure to high heat, heavy vibration due to proximity to the engine, inferior material, and exposure to the elements
- This leads to dried, cracked flanges with vacuum leaks and lean hard starting engines

MR. FUNNEL®

REMOVES WATER FROM FUEL

The Fuel Filter Funnel by Mr. Funnel is a heavy-duty, anti-static, and fast flow funnel with built-in filter technology. When fuel is poured through the Fuel Filter Funnel, water and debris will not pass through the filter's fluoropolymer-coated stainless steel filter. Only filtered fuel flows through to your engine, improving its efficiency, durability, and proper operation. The sump area collects the deflected water and debris for proper disposal. Filters gasoline, diesel, heating oil, kerosene and 2-cycle mixed gas.

What Model Do I Need?

The Mr. Funnel Fuel Filter comes in four different fast-flow models (See below). Models differ mainly on flow rate. If your need is to transfer five gallons or less of fuel, then the F1 and F3 are for you. If you are transferring more then 5 gallons, then the F8 and F15 are right for you. Our F15 is our fastest flow model at up to 15 gallons per minute! This model can also be used at a fuel pump. Get your Mr. Funnel Fuel Filter today, and keep your engine running smooth!

BOYESEN ACCELERATOR PUMP COVERS

Stock accelerator pump covers permit only a 60% - 70% fuel charge in the pump chamber. Turn the throttle and air trapped in the chamber is compressed disrupting fuel delivery. All the while tuning the squirt means a complicated change of the leak jet.

YUASA BATTERIES

Not all snowmobiles have an electric start, but if you are lucky enough to own a model that does, you know one thing: you want it to start when you push that button. And so does the manufacturer. That is why they choose Yuasa. Some of Yuasa's most heavy-duty batteries live under the hoods of some of the biggest and fastest snow machines in the country. Just ask Arctic Cat, Bombardier (Ski-Doo), Kawasaki, Polaris and Yamaha. Manufacturers demand the best and they overwhelmingly choose Yuasa. So should you.

MAINTENANCE FREE

Absorbed Glass Mat (AGM) Technology is an advanced battery design used in Yuasa's Maintenance Free Batteries that eliminates water loss. Once it's filled with acid the battery is permanently sealed - so you'll never need to fill it with water or check the acid level.

Long Life
Because of its lead calcium design, the AGM battery will hold its specific gravity more than three times longer than conventional lead antimony types. This means much longer periods between charges when the battery is used in a standby mode, like winter storage.
And to remain factory-fresh the AGM battery is shipped dry along with its own pack of high-gravity acid that's added at the time of installation.

Sealed, Non-spillable
Once filled with acid from its special packs, the AGM battery is virtually maintenance free. It's totally sealed and all of the acid is absorbed in the special plates and separators, so there is no need to worry about acid leaks on valuable vehicle parts and accessories.

YUMICRON CX

The YuMicron CX was the first small engine starting battery to use "lead calcium" technology. This special technology means the YuMicron CX generates more power, requires less maintenance, and lasts longer than any other conventional battery.

More Power
Because of its unique design, the CX will generate 5% to 8% more cold cranking amperage than our own high-output YuMicron lead-antimony battery. For high compression machines, this means greater reserve capacity and more starting power.

Less Maintenance
The YuMicron CX lead calcium technology also reduces water loss, so the CX requires servicing (water filling) only about one-eighth as often as ordinary lead-antimony types.

Longer Life
The YuMicron CX holds its specific gravity more than three times as long as lead-antimony type batteries resulting in a longer shelf life. This feature means longer periods between charges, especially during winter months.

~ IMPORTANT ~
Yuasa Yumicron/Yumicron CX Batteries are shipped dry with no acid. To order acid for your battery first check the acid volume needed on the Battery Specification Chart then order part # SO-ACID for every 21 oz. needed.

CONVENTIONAL

A workhorse battery engineered to protect against corrosion, withstand vibration and deliver high cranking power.

The industry standard for motorcycles and riding mowers, our Conventional Battery is anything but conventional. This workhorse is for applications requiring operation on uneven surfaces and vibrating environments - even when the weather's dealing its worst. It's the rugged, reliable and dependable battery that customers are looking for!

These features are built into our conventional manifold vented battery - and every battery in the YUASA line:

- Patented separators provide high cranking power
- Through-partition construction delivers maximum power
- Unique sealed posts resist corrosion for longer battery life
- Polypropylene cover and container thwart damage from gas, oil, and impact
- Heat-sealed, bonded unit fabrication protects against seepage and corrosion

TYTANEUM BATTERIES

Tough. Reliable. Whether you ride daily, seasonally, or just on weekends, you'll get more enjoyment out of your motorcycle, ATV, PWC or snowmobile with a TYTANEUM battery. Our batteries perform reliably during off-road, over water and cold weather use, and keep their charge even after months of storage. Available in traditional flooded or the new sealed AGH designs, TYTANEUM batteries are built to withstand punishing vibration, salt spray, gas and oil, and protect against equipment-damaging spills, corrosion and seepage. And because nothing ruins a weekend faster than a dead battery, we use advanced designs and manufacturing techniques to shorten current paths and reduce resistance, giving you higher cranking power and maximum battery life.

MAINTENANCE FREE HIGH PERFORMANCE

SEALED MAINTENANCE FREE

Once these batteries are put into service, they become a completely sealed unit requiring a lot less maintenance than Conventional Batteries. Although the battery still needs to be charged on a regular basis if your vehicle is not in use, there is no need to monitor the fluid level in this battery type. Unlike the Conventional Battery, once this type battery is sealed, it becomes spill proof, which can eliminate damage from battery acid that can occur from using a flooded battery.

FACTORY ACTIVATED MAINTENANCE FREE

The same convenience and technology as the Sealed Maintenance Free Batteries mentioned above, except this battery is sealed and activated at the time of manufacture. Very convenient to the point that all that needs to be done is put the battery into your vehicle and you are ready to ride. The only downside of this type of battery is that all batteries once activated have a shelf life, and if this battery is not going to be used right away, or be put in a vehicle that is not going to ridden on a regular basis, the battery will need to be kept charged on a battery maintainer.

TYTANEUM BATTERIES

CONVENTIONAL

This type of batteries has flooded electrolyte and is very accessible. These batteries have to be carefully and periodically maintained. The conventional batteries are normally less expensive than the other types mentioned, but with the cost savings come more maintenance. You will need to add distilled water from time to time to prevent the battery from sulfating. Water loss is a normal characteristic of this type of battery because of the high temperature inside, and the process of electrolysis and evaporation. This means the fluid level of the battery needs to be checked on a regular basis. Conventional batteries also tend to discharge more rapidly than AGM type batteries.

Notes: FOR AT-01227			
1. FET regulator can handle much higher amps (typically 35a>50a)			
2. FET regulator has less heat problems and operate about 20 deg. Celsius (or more) cooler than SCR types.			
Overheating is the main reason for standard scr type regulators failing.			
*122012 also fits many motorcycle and snowmobile applications			
*Performance regulators are made with newer power circuits.			
Due to its better heat sink capacity it performs much better than the oem regulator

CDI BOX / REV KIT

Procom offers you a wide selection of CDI Box / Rev Kit for Honda, Yamaha, Suzuki, Kawasaki, Polaris, Bombardier and many more...

High Performance • Faster Than Ever

How It Works?

1. We have built in the best ADVANCED timing curves ready to plug in and go.
2. Increased additional 1,000+ RPMs over stock CDI.
3. Stronger spark energy for easier start

Our improved CDI Box will drive your machine faster than ever!

RECTIFIER

Improved Rectifier / Regulator - Increases Horsepower up to 8%

High Performance • More Horsepower

Q: How does the re-designed Rectifier increase horse-power?

A: We built an extra sensor and switch in the unit. When the battery is near fully charged, the sensor instructs the Magneto Rotor to run without cutting the magnet field. The rotor then runs lighter and saves the power to the engine. The engine gains more horsepower to drive your ATV faster!

POWERJET

Our PowerJet is a simple yet complicated device. It measures the outside air temperature very close to where the stock sensor is located, and adjusts the signal from the OEM air temperature sensor to the ECU to make use of the built in Air Temperature Correction factor that is built into every stock ECU.

What this accomplishes is that the ECU is told that the intake air is a little cooler than it is, and the ECU will respond by injecting a fraction more fuel depending on the PowerJet setting. You as a rider will notice a substantially improved engine response when you twist the throttle.

The neat thing is that when under constant load (constant speed) the oxygen sensor in the exhaust will make the ECU correct the fuel/air ratio back to stock! However, as soon as the system notices an increase in power it switches from closed loop (oxygen sensor feedback) back to open loop (no feedback) and will correct the fuel/air ratio by the amount you selected on the PowerJet.

PowerJet can be easily installed by plugging it in between the stock AIT sensor which is usually located somewhere on the airbox and the bike's wiring harness. Each PowerJet comes with the exact plug in connectors and installation will normally only take a few minutes. Finding the air temperature sensor usually takes more time than plugging in the PowerJet. You can leave the PowerJet sitting under the bodywork somewhere as it is designed to be rugged and waterproof.

Procom MAGIC POWER BOX

Compatible with any ATV, Motorcycle, Watercraft or Snowmobile with an electric start!

A New Concept of Power!

POWER

Installation is very easy. Just attach the leads to your battery mounts.

773-400

Concept of the Magic Power Box: Without the Magic Power Box, when you throttle up your machines, the battery output voltage is unstable; it changes between 11V and 15V, the spark energy is inconsistent and your machine lacks power. With the Magic Power Box, the output voltage will be almost 100% stable. Your machine can reach the maximum power.

• Increase Horse Power • Increase Torque
• Quicker Throttle Response • Increase Spark Energy
• Improve Fuel Efficiency • Easier Start & Runs Cleaner
• Less Spark Fouling • Brighter Headlights
• Longer Battery Life • Reduce the Radio Noise

To get the most out of upgrades like high compression pistons, performance camshafts, exhausts or another power adding components, adjusting the amount of fuel being delivered is a logical next step. Much like re-jetting or adjusting the pilot, needle, and main jet circuit in a carburetor, Wiseco's 3.5 Fuel Management Controllers can really enhance the performance of aftermarket parts. Wiseco's new Generation 3.5 Fuel Management Controllers for EFI tuning are extremely simple and easy to use and better yet they require no dyno, complex hookups, power supplies, or extra wiring harnesses! With the push of a button, you can easily adjust fuel delivery by adding/ subtracting fuel from each zone to work in conjunction with your latest modifications.

PULL STARTER LEAK SHIELD

The Honda Pull Starter Leak Shield by High Lifter shields your engine from water and mud. If you ride a Honda ATV, then you are at risk. After a period of time and only moderate use, many Honda owners experience oil and smoke from the exhaust and/or loss of power. This can lead to hefty rebuilding costs, not to mention lost time on your ATV.

Kit Contains: Lexan shield (stronger than plexi glass), one gasket, one recoil adapter and mounting hardware.

HALOGEN HEADLAMP BULBS

ARCTIC CAT | POLARIS | SKI DOO | YAMAHA - SEE APPLICATION GUIDE ON OPPOSITE PAGE

ALL WEATHER
(AW) These bulbs are designed for rain, fog and snow and are just as bright as standard halogens. The all weather dichroic coating keeps the glare down from the elements.

ALL WEATHER BLUE
(AWB) Same advantages as the all weather, plus the blue coating is more noticeable to oncoming traffic. Note: The coating does decrease the light output slightly.

GOLD
(G) The biggest advantage is its ability to be seen by oncoming traffic.

XENON BOOSTED
(XPB) Best performing lamp on clear nights, the xenon gas increases the light output to compensate for the special vycor blue coating. These combinations bring the light as close to daylight as possible.

* Designed for 27"-28" heavy/aggressive tires

** Note – This kit will eliminate the EBS function. Removing EBS results in a more performance oriented driving experience.
If you wish to keep the EBS function please contact EPI directly, as a different helix is needed.

*** Reduces engine braking and greatly reduces how aggressive the engine braking is.

- Provides superior wear and heat resistance without damaging your clutch like the OEM sliders
- Allows the clutch to upshift and backshift more efficient with less bindage and less clutch wear.

BRONCO DRIVE CLUTCH REBUILD KITS

- Cam shoe, and plastic washer are made with Nylon PA66 + Teflon (PTFE) 20% + Fiber Glass 30% +
- Molybdenum disulfide (MoS2) 3% to have better wear resistance
- The O.E. clutch roller was in plastic, which resulted premature failure rates
- Our clutch roller is made of SCM415 Steel, and the inner liner is made up of Premium German Imported fiber
- This increased the roller hardness to HRC 54 (+4); Far Superiour to standard OEM Fiber
- We do this improvement to make our Bronco Cam Kit last longer than conventional O.E.M plastic rollers
- Every kit will be packed by Bronco polybag
